

RRS 2014 Las Vegas report:

I would like to thank the Association for Radiation Research for awarding me the travel bursary and giving the opportunity to attend the Radiation research society 60th annual meeting in Las Vegas, USA.

At the Radiation research society 60th annual meeting, I have had a poster presentation entitled "The generality of the intercellular induction of apoptosis signaling system" in which I was discussing how general the system of intercellular induction of apoptosis is.

Throughout the poster session, I had some discussions with some of the attendants who were interested in the work. We discussed the measurement of the reactive oxygen/nitrogen species involved the signaling in addition to some physical factors that may affect the signaling such as the co-culture distance and the oxygen level. The discussions came up with some new ideas through which we can expand the work.
